

BST860

Valve spring compressor bench and Cylinder heads operations

BST860 valve spring compressor bench and cylinder head work station allows all kind of operations on cylinder heads as disassembling, reassembling and their all-around control in an efficient, practical and safe manner.

The head is securely locked by a rapid system of clamps on the table that can rotate 360° and, therefore, allows convenient access to all the points on which you want to work.

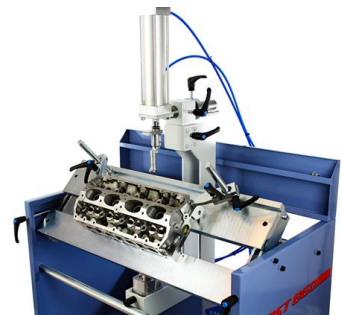

A regulator complete of a filter allows to adjust the working pressure.

The bench is equipped with an adjustable pneumatic cylinder for operations on the engine valves that adapts to all the heads; in addition, it is operated by a foot pedal, leaving the hands free to work.

Standard equipment

- Upper adjustable pneumatic cylinder
- Lower retainer pneumatic cylinder
- Pneumatic foot control
- Filter-lubricator unit with pressure adjuster and manometer
- 360° roll-over table
- Quick clamps for cylinder heads
- Set of different sizes retaining tips
- Wrench set
- Instruction manual

Specifications

- Table dimensions: 875x350 mm
- Useful table surface: 850 mm
- Air pressure: 6÷8 bar
- Dimensions (LxWxH): 970x680x1680mm
- Weight: 130 kg
